

## 문제 4-8

$$T(n) = T(n-1) + \frac{1}{n}$$

$$= T(n-2) + \frac{1}{n} + \frac{1}{n-1}$$

$$\vdots$$

$$= T(0) + \sum_{k=1}^n \frac{1}{k}$$

$$\sum_{k=1}^n \frac{1}{k} \leq 1 + \int_1^n \frac{1}{x} dx = 1 + \log n - \log 1 = 1 + \log n$$

$$\therefore O(\log n)$$

## 문제 6-2

Dynamic Programming 피보나치 수열:  $F(n) = F(n-1) + F(n-2)$  (힌트: 작은 값부터 순서대로 계산한다)

```
def fibonacci(n):
```

```
    if n < 2:
```

```
        return n
```

```
    cache = [0 for i in range(n+1)]
```

```
    cache[1] = 1
```

```
    for i in range(2, n+1):
```

```
        cache[i] = cache[i-1] + cache[i-2]
```

```
    return cache[n]
```

```
print(fibo(n))
```

T.T 너무 어렵습니다
